**Why choose enee.io to
reduce costs and avoid
disruption:**

- ✔ Secure energy efficiency and extend the life of your batteries
- ✔ Monitor locally or compare data across multiple locations
- ✔ Automated alerts prompt action before problems occur
- ✔ Pre-empt repair and replacement costs for accurate budgeting
- ✔ Simplify compliance - evidence testing with autosaved data
- ✔ Secure plug-and-play technology that's quick and easy to install

Reduce costs through intelligent energy system monitoring

Prevent power outages and extend the life of your batteries with the low-cost smart solution from enee.io

Get maximum uptime and make nationwide savings

Poor energy system information can lead to unexpected problems, power outages, and higher maintenance fees. Across multiple sites, these costs add up. Using our plug-and-play technology, you can test batteries locally, monitor performance remotely, and get alerts to predict maintenance. This helps to prevent outages, drive energy efficiencies and reduce your system's operational and environmental costs.

Take control of your backup and emergency power

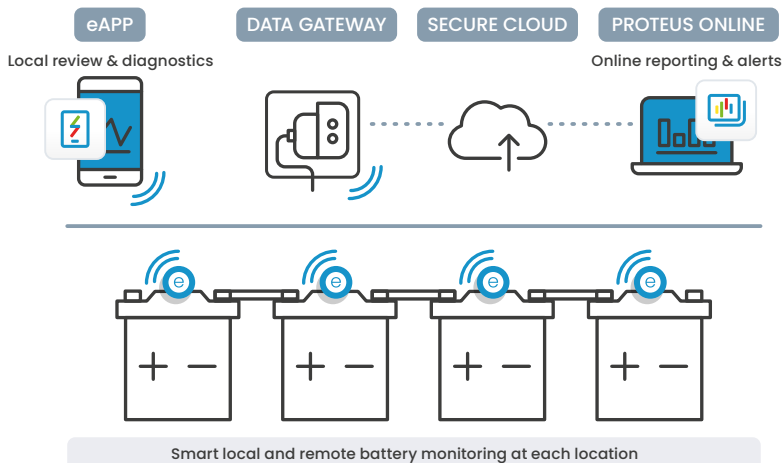

How it works

Wireless smart sensors gather real-time insights from every battery in every location. Check battery performance for the entire business or by region in one intuitive dashboard. Early warnings enable proactive maintenance protecting your backup power.

Designed to ensure power in times of need

The enee.io system is ideal for business and public infrastructure installations, such as telecoms networks and emergency lighting, data centres, banks and hospitals - anywhere with a backup and emergency power system where battery banks are tested regularly.

Help increase the life of your system

On average, batteries in energy systems fail 1.5 years sooner than intended. With preventative alerts, you can take action before costly problems arise.

The cost-effective solution to reliable power

enee.io combines the latest sensor technology with easy-to-read dashboard analytics and reporting. Get set up in minutes to maximize efficiency and secure power in times of need.

Increase the reliability of your battery system and start reducing costs today at enee.io

enee.io is the fitness tracker for energy systems

enee.io increases access to reliable and affordable energy by improving the life and efficiency of energy systems. Through plug-and-play sensors, mobile phone applications and web-based reporting, enee.io provides customers with the information they need to optimize energy usage, improve energy system health and safeguard backup power supplies.
