enee.

Increase battery life by up to **40**%

Optimize your energy system and enrich business activity

Secure continuous power and boost profitability with enee.io

Keep operations running 24/7 and make nationwide savings

An unreliable grid causes disruption, and a lack of information about your energy system can increase maintenance and fuel bills. Whether it's one or thousands of sites, these costs add up. With our plug-and-play technology, you can monitor energy system performance, consumption, and prevention alerts to optimize power. All while lowering costs.

**Why choose enee.io to help save money and avoid disruption:**

- Enhance business performance through wiser energy use
- Compare energy data at one location or across multiple sites
- Save money: know when to switch power sources or run generators
- Pre-empt repairs and maintenance
- Address issues before costly problems arise
- Manage 1000s of sites from one dashboard
- Quick and easy set-up with plug-and-play technology

enee.io

Reduce costs, increase profitability and achieve maximum power uptime

Energy system fault detected

Your battery needs charging

How it works

Our wireless smart sensors give you complete visibility of energy system performance, site by site or for an entire region. Review data locally with our smartphone app and accurately monitor your entire operation with Proteus intuitive online reporting. It's a powerful combination that gives you insights and preventative alerts. Carry out proactive maintenance, switch power sources at the best times, and secure available backup power to keep your business running.

Help increase the life of your system

On average, batteries in energy systems fail 1.5 years sooner than intended. With preventative alerts, you can take action before costly problems arise.

The cost-effective solution to reliable power

enee.io combines the latest sensor technology with easy-to-read dashboard analytics and reporting. Get set up in minutes to start maximizing energy efficiency and minimizing overheads.

Increase the reliability of your energy systems and start reducing costs today at enee.io

enee.io is the fitness tracker for energy systems

enee.io increases access to reliable and affordable energy by improving the life and efficiency of energy systems. Through plug-and-play sensors, mobile phone applications and web-based reporting, enee.io provides customers with the information they need to optimize energy usage, improve energy system health and safeguard backup power supplies.
